# Mille-Tie™

**MILLE-TIE: The fastest, safest and most economic way to tie cables. Will never cinch or crush cables ever – ideal for Cat 5e, Cat 6, 10 gig and Fiber.**

- 305mm cable management strip (33 cells).
- Optimised for CAT6 and fibre optic use.
- Removable and reusable.
- Unique, versatile design.
- Reduces waste.
- Speeds installation Fits wide size range
- LSOH and UL1565 (Plenum) available.
- Approved by leading datacoms companies.

### INTELLIGENT GRIP SYSTEM

Mille-Ties help reduce possible cable compression because excessive fitting forces cause the ties to stretch and ultimately release when the pressure become too great. Mille-Ties also flex around cables to avoid pinching, and are made from special soft polymers that leave no sharp edges when cut. **Also try out the 22" (560mm) Heavy Duty Mille-Tie or our quick release QuickStrip versions**

Thread: 1/4" x 20"

# Mille-Rod Polymer

Mille-Rods range of Polymer Push-Pull rods (Fish Rods) and accessories are some of the most versatile tools you will ever purchase and will become an indispensable addition to your tool box. They require very little care and can be used in a large range of environments and jobs from house and car to leisure and boat. The fastest way to connect two points or reach those impossible to get to locations.

## BENEFITS

**Strong and Flexible • Non Conductive • Non Corrosive • Extensive range of attachments**

### CARE

Your Mille-Rod Polymer Rods are designed to be a robust tool. They will take a great deal of pressure and force, but a little care will help them last a lifetime.

- Keep rods and especially the threats clean.
- Wipe down after use, should debris build up in either male or female threats just wash out.
- Should rods or attachments become distorted just gently re-straighten, they will continue to work perfectly.
- Do not use next to an open heat source.

### ENVIROMENTS

Thanks to the long life plastic used in their manufacture they will last you a lifetime. Over time color will fade slightly but this does not effect performance.

## SPECIFICATIONS

### BLACK RODS (Round)

50% Long Strand Glass Reinforced Nylon.

These stiff rods are designed to cover open spaces with little flex.

Average Flex 5 Deg

### RED & GLOW RODS (Round)

Low Viscosity Polycarbonate
